Subject: InSider app, live data, upgrading

Good job on the statistics pages. The client is already thinking of more things they could do with the data from ProPublica and other sites.

That means it's time to update the site to get live data with AJAX. Javascript has recently added a new function `fetch()` that get's live data with AJAX. We want you to get the live data with this new function.

Also, I'd like you to replace those long strings of HTML in JavaScript with a templateoriented approach, using Vue.js. That will put the HTML in HTML pages, where it belongs, and can be styled by HTML/CSS gurus, even those who don't know JavaScript.

Thanks,

Paula
